DESIGNED TO PROTECT

HAND PROTECTION KEY TECHNOLOGIES

Our Base Fabrics

Force360's ProForce reinforcement fabric utilizes a Kevlar construction base to provide amazing grip, abrasion resistance and protection from jagged objects. Used strategically over Enduro fabric, gloves using ProForce are amongst the toughest performers.

Force360's exclusive Enduro fabric is a premium sourced Korean synthetic leather. Assured quality, 0.8mm thickness and colour fastness combine with exceptional abrasion resistance to provide the wearer with a long wearing protective glove.

Force360's exclusive Sinomac engineered yarn not only offers Cut level 3 or 5 protection, but brings coolness to the hand in combination with a soft, flexible feel maximizing wearer comfort and dexterity.

10 gauge provides good dexterity for heavy duty work.

13 gauge provides excellent dexterity for general purpose work.

Certified Cut Level 3 protection.

15 gauge provides enhanced dexterity for fine work.

18 gauge provides ultimate dexterity for precision work.

Certified Cut Level 5 protection.

Force360's Active Grip Technology (AGT) is a proprietary glove coating formula that provides industry leading wet, dry and oil grip.

Force360's Active Grip Technology (AGT) is a proprietary glove coating formula that provides industry leading wet, dry and oil grip. A secondary water resistant 3/4 coating is added underneath the AGT to ensure hands stay dry, making them ideal in wet environments and applications.

Force360's Active Grip Technology (AGT) is a proprietary glove coating formula that provides industry leading wet, dry and oil grip. A secondary oil resistant coating is added underneath the AGT to ensure hands stay dryer, making them ideal in oily environments and applications.

This glove's palm is coated in a material that resists oil and petroleum degradation.

Protection from the sun's damaging UV rays is assured with Force360's UPF50+ rating.

Keeping hands cool is critical for comfort and improved wearer compliance. Only selected materials that allow air flow are used to ensure 360 degree air circulation and enhanced breathability.

Perfect form, fit and comfort is achieved through Force360's unique knit pattern that mimics a 'hand at rest', minimizing hand fatigue.

Force360 gloves last longer due to a double layer fabric coupled with double stitching reinforcement in high wear areas.

Force360's neoprene based NeoSorb 2.5mm padding is strategically placed to absorb vibrations and improves grip when using hand and power tools.

Force360's silicon gel based GelPan 3.5mm padding is strategically placed to absorb vibrations and improves grip in heavy conditions and performs exceptionally with heavy duty power and pneumatic tools.

Force360 only uses 4 Way Spandex in its glove construction allowing complete hand movement and flexibility.

The Actifresh Sanitized treatment neutralizes odour creating bacteria. Gloves are kept fresher for longer. Actifresh resists UV degradation and maximizes product longevity.

The unique TPR structure on the back of hand provides armoured protection against impacts, scrapes and knocks for the wearer.

The Force360 Velcro closure allows the glove to be securely fastened ensuring a snug fit that reduces glove movement on the hand.

Breathable brushed terry lining is used to keep hands warm from extreme cold.

3M 100 gsm breathable Thinsulate winter lining is used to keep hands warm from extreme cold.

Only premium deerskin hides are selected and used in this glove to ensure the most soft and supple finish possible.

The ID area allows the wearer to mark their gloves with their name for easy ownership recognition, or add an issue date for usage monitoring.

The components of this glove are food contact approved according to Directive 2002/72EC for safe handling of meats, fish, shellfish and vegetables.

No Polyvinyl Chloride (PVC) is used in the manufacture of this glove. PVC is a known human carcinogen and contains several dangerous dioxins.

As an Australian owned company Force360 designs its Hand Protection range to counter the tough working conditions our country experiences.

All product packaging is designed for maximum retail presence.

As part of Force360's commitment to environmental responsibility this packaging is made from recyclable material.

SAFETY EYEWEAR KEY TECHNOLOGIES

Certified medium impact rated protection to AS/NZS 1337.1:2010.

Certified liquid splash rated protection to AS/NZS 1337.1:2010.

Force360 uses its own Diamond Tech Hardcoat on all FPR lenses. Diamond Tech Hardcoat is extremely scratch resistant and resists acid and solvent degradation as well as scratches from dusts and debris.

Force360 uses its HydroTech Anti Fog coating on most FPR safety lenses. HydroTech AF is a washable hydrophilic based coating providing an anti static finish that repels dusts and particles and prevents fog forming on the lens, the ideal coating for hot and humid conditions.

The Force360 patented FitAll Sidearm system is designed to gently hug all head shapes. A world first product that ensures extreme comfort for every wearer. FitAll Sidearms hugging design ensures that the safety spectacles never slips or moves, making them the most secure and comfortable spectacle in the marketplace today.

The Force 360 FitLok switch rotates and locks the sidearms to a wider position for a relaxed pressure relieving fit. Safety eyewear featuring a Fitlok switch is the obvious choice for all day wear.

Force360 V Pivot is unique to the Guardian+ range of goggles. The face visor can be lifted and positioned above the goggle when not in use allowing easy access to the face when required.

Force360s Pivot Hinge allows the wearer to adopt any angle of the glasses to their face shape by moving the sidearm position, creating personal cover and comfort.

Protection from above is sometimes critical. The TPR browguard reduces particles and sweat reaching the eyes. It is easily removed when not required.

Force360's removable Element Seal provides protection from dust and harsh winds that can compromise standard safety spectacles. The Element Seal is made from high quality EVA ensuring a soft and positive seal on the skin.

The unique design of the floating lens means airflow is maximized behind the lens and fogging is minimized. The best design for highly humid and hot environments.

Premium non slip TPR is used to create Force360's Comfort Side Arms. This co-moulded feature reduces pressure and wearer fatigue.

The nose bridge is the apex point for eyewear comfort. Force360 utilizes Flex Bridge technology, the softest shape memory material that flexes and moulds to shape, for all day comfort.

UV400 Polycarbonate lenses offer the wearer the best protection against UVA and UVB damaging rays. 100% protection is the standard across the entire Force360 FPR eyewear range.

SAFETY EYEWEAR LENS ICONS

Perfect optical quality for all day use. Renders all colours naturally and allows 89%+ of visible light transmission, making them perfect for indoor applications.

Effectively reduces solar glare with minimal visible light reduction. An effective lens if frequently moving between shaded and bright areas.

Perfect optical quality for all day use against solar glare. Refines colours and provides excellent outdoor coverage on bright days. An effective IR and blue light blocker.

A darker brown lens for brighter outdoor conditions to improve contrast and also block blue light rays. An effective outdoor lens that enhances natural colours and contrast.

Polarized lens technology effectively acts like a venetian blind and blocks horizontal reflected light, especially effective on water or around highly reflective surfaces like glass and metal. Glare is reduced and colours, contrast perception and depth are all enhanced. Eye strain is minimized.

Perfect optical quality for all day use. Renders colours naturally and provides excellent outdoor coverage on bright days by reducing solar glare. An effective IR and blue light blocker.

Visually the silver mirror lens renders objects slightly brighter than the smoke lens. Colours remain natural and provides excellent outdoor coverage on bright days reducing solar glare.

Perfect for use in low light conditions to improve contrast and enhance colours. A great outdoor lens particularly during first and last light. A good blue light blocker.

Perfect for use in low light conditions to improve contrast and enhance colours. A great outdoor lens particularly during first and last light. A good blue light blocker.
